Mycoplasma hyorhinis Field Isolates for Vaccine Development

Industry Need
Mycoplasma hyorhinis is increasingly implicated as a pathogen of pigs, but no vaccines are commercially available.

Solution
A series of clinical isolates that may have utility as vaccine candidates and/or challenge organisms for testing the efficacy of M. hyorhinis vaccines.
About the technology

• *Increases number of isolates available for vaccine development*
  – Commercial vaccines
  – Autogenous vaccines
  – Challenge strains
Application areas

- **Animal health**
  - *M. hyorhinis* vaccine development
  - Challenge strains for determining vaccine efficacy
Status

- **Development Stage**

- **Intellectual Property**
  - Tangible property
